

Geoscience Representative: Council Nomination 2025

Adrian Davis, P.Geo.

Statement of intent: As we celebrate 25 years of Geoscience NB joining Engineering NB, I reflect on my 25-year journey. Beginning in 1999 with greenfield exploration in the Torngat Mountains of northern Quebec, I launched a career that has taken me across Canada, spanning exploration, mining, prospecting, and laboratory geotechnical testing.

Throughout my career, I've stayed connected to the communities I serve, working "in the trench" and "on the front lines." I've had the privilege of visiting New Brunswickers in their homes to discuss prospecting, exploration, and mining. Listening to their stories and respecting their experiences has shaped my approach, deepening my commitment to collaboration and public safety.

On Council, I've proudly contributed to expanding geoscientist representation, enhancing professional standards, and supporting sustainability. Initiatives like "Touching Lives" have inspired future geoscientists, while national collaborations have harmonized standards and fostered innovation.

Looking ahead, my focus will be on:

1. Enhancing safety regulations and leveraging AI to strengthen geoscience fundamentals.
2. Empowering members through mentorship and professional development programs.
3. Strengthening and modernizing regulations to address critical geoscience areas, ensuring they protect public safety and the environment while promoting sustainable development.
4. Refining outreach efforts to inspire the next generation and amplify geoscience's role in building a sustainable future.

Like a well-built bike wheel, geoscience moves forward when every spoke—its people, principles, and innovations—is strong and aligned. We can strengthen our profession and ensure it thrives responsibly and innovatively.

Biography: *Adrian Davis is a geoscientist with 25 years of experience spanning exploration, mining, prospecting, and geotechnical testing. Starting in 1999 with greenfield exploration in the Torngat Mountains of northern Quebec, Adrian has worked "on the front lines" across Canada, connecting with communities and fostering trust in geoscience.*

As an APEGNB Councillor, Adrian has championed geoscientist representation, advanced professional standards, and supported sustainability initiatives. He is dedicated to modernizing regulations, leveraging AI to enhance geoscience fundamentals, and inspiring the next generation to ensure a sustainable and innovative future for the profession.
